LAYOUT

A complete registry of all properties and citizens that have activities within the municipality region is kept.

Information such as taxation, services and all communication with the citizens, are organized around the properties and the citizens as well as their activities.

Included in the registry are also citizens who are not residents but have various activities within the municipality.

From the registry you are then given the ability to produce reports or enquiries on any person for statistical or other purposes.

Yl@tis-Demos

ACCESS/BENEFITS

The use of one system under the same RDBMS provides a system that has all the benefits of a modern system.

One such benefit is its high security, which combined with the easy access provided for a user and the ability to interface with all Government Departments creates a system that will improve your existing efficiency and quality.

Yl@tis-Demos allows easy expansion and growth as your needs and requirements expand and grow therefore providing a flexible yet dynamic and powerful system.

This makes it understandable why **Yl@tis-Demos** is vital to municipalities.
